

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

Cancel claim 1

2. (currently amended) ~~The system interface recited in claim 1~~ A system interface comprising:

plurality of directors, one portion of such directors being adapted for coupling to a host computer/server and another portion of the directors being adapted for coupling to a bank of disk drives, the plurality of directors being interconnected through a network;

a common resource section for providing a resource shared among the plurality of directors; and

wherein the common shared resource section includes a shared computer code used by the plurality of directors.

3. (original) The system interface recited in claim 2 wherein the code includes computer code for booting up each one of the plurality directors.

4. (original) The system interface recited in claim 3 wherein the common shared code storage section is interconnected to the directors through the network.

5. (currently amended) ~~The system interface recited in claim 1~~ A system interface comprising:

plurality of directors, one portion of such directors being adapted for coupling to a host computer/server and another portion of the directors being

adapted for coupling to a bank of disk drives, the plurality of directors being interconnected through a network;

a common resource section for providing a resource shared among the plurality of directors wherein the common shared resource section includes a shared computer code used by the plurality of directors; and

including second, redundant common shared resource section.

6. (original) The system interface recited in claim 5 wherein second, redundant common shared resource section stores computer code used by the plurality of directors in the event the first mentioned one of the common shared code storage section fails.

7. (original) The system interface recited in claim 5 wherein such system interface includes a second, redundant network coupled to the second shared resource section for use in interconnecting the directors in the event the first mentioned one of the shared resource sections fails.

8. (currently amended) ~~The system recited in claim 1~~ A system interface comprising:

plurality of directors, one portion of such directors being adapted for coupling to a host computer/server and another portion of the directors being adapted for coupling to a bank of disk drives, the plurality of directors being interconnected through a network;

a common resource section for providing a resource shared among the plurality of directors wherein the common shared resource section includes a shared computer code used by the plurality of directors; and

wherein the network is a packet switching network.

9. (original) The system recited in claim 8 wherein the redundant network is a packet switching network

10. (currently amended) ~~The system interface recited in claim 1~~ A system interface comprising:

plurality of directors, one portion of such directors being adapted for coupling to a host computer/server and another portion of the directors being adapted for coupling to a bank of disk drives, the plurality of directors being interconnected through a network;

a common resource section for providing a resource shared among the plurality of directors wherein the common shared resource section includes a shared computer code used by the plurality of directors; and

including a cache memory coupled to the directors and the shared resource though the network.
